“Strategic resources in metallic mining”

## Until now...

In this last quarter of 2018, the partners of the ESMIMET project have met at the Higher Technical School of Mining Engineers (ESTIM) of the University of León to hold the fourth follow-up meeting, since the project was launched July 2017.

ESMIMET, representatives of SIEMCALSA and the Dirección General de Energía y Minas de la Junta de Castilla y León, have attended the Conference "The future of mining municipalities" held at the House of Cultures of Bembibre (León) between 19 and November 20, 2018.

The researchers of the CARTIF Technological Center Pedro Acebes and Jorge Calvo, and the SIEMCALSA researcher, Óscar Fadón, who belong to ESMIMET project team, have participated in the 5th scientific seminar held on 13 and 14 December in Berlin and which has been organized by the Association for Mining, Mineral Processing and Extractive Metallurgy PROMETIA, of which both entities are part.

ESMIMET takes part in the Spatial Observation Session Applied to Mining, which has held in the context of the REMIX project 'Smart and Green Mining Regions of the EU', in the Business Solutions Building of Castilla y León de Arroyode la Encomienda (Valladolid). Representatives of SIEMCALSA, members of ESMIMET consortium, together with other entities such as GMV, Grupo Tecopy or Voxel 3D, have reflected on the spatial observation applied to mining. They have also analyzed the Action Plan for the mining sector in Castilla y León.

## Coming Soon...

In 2019, the planned technical and dissemination tasks, as well as project management meetings, will continue.
