“Configuration of the network in technologies of
Metallic Mining”

Until now...

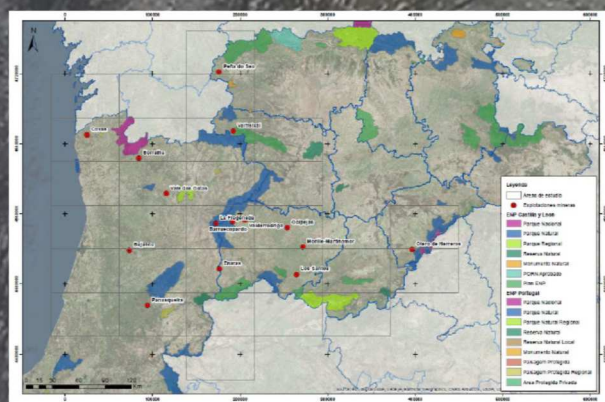

Past February 14th the Conference organized by CONFEDEM was celebrated, with the support of the Junta de Castilla-León, through the General Directorate of Energy and Mines, in the Assembly Hall of the School of Industrial Engineers of Valladolid. Entitled "Industry, motor of economic and social development", where members of ESMIMET belonging to CARTIF and SIEMCALSA have attended.

Among the activities related to environmental and energy techniques, the identification of environmental impacts and proposals for innovative preventive and corrective measures for pollution control and environmental monitoring have been carried out.

Coming Soon...

In the first quarter of 2019 within the framework of the POCTEP-ESMIMET Project, the deliverable on mining techniques traditionally applied in metal mining has been fully developed, making a parameterization and an assessment of the mining potential of different exploitations in Spain and Portugal.

In the following quarter of 2019, the planned technical and dissemination tasks, as well as project management meetings, will continue to be carried out.
